

AIM

KEY DRIVERS

INTERVENTIONS

Reduce percentage of children with community acquired pneumonia who have a CXR where there is no evidence of severe or complicated pneumonia to less than 10%

Increased care provider involvement

Effective communication between care providers

Accurate knowledge of guidelines

Accurate identification of patients with severe or complicated pneumonia

Performance dashboard

Collection of high quality data about those having a CXR not recommended by guideline

Guideline seminar (slide deck), Grand rounds, Staff update bulletins, Radiology meeting updates

Laminated guideline algorithm cards, Leaflets, Posters, Fact Sheets

Appropriate leadership - recruitment of PAU Physician & Nurse champion, Focus group discussion

Clinical training and supervision; Ward rounds

Collection of data regarding CXR indication – proforma / radiology data systems

Positive reinforcement; run charts of each PDSA cycle
